Internal wiring for ordinary luminaires	<ul style="list-style-type: none"> <li>- Internal cable</li> <li>- Cord anchorage</li> <li>- Cable length</li> </ul>	OSM/LUM-ETF5	2019 ETICS Plenary Meeting

### Question

Is the following deemed to be internal wiring?

- 1) The flexible cord is inter-twined with the chain.
- 2) The flexible cord terminates at the flange "canopy".
- 3) The flexible cord is arranged so as to prevent any tension.

### Decision

It was agreed that the cable in question is an internal cable but shall comply with EN 60598-1 sub clause 5.2.2 or "other cable" with insulation complying with EN 60598-1, and shall be sized according to the load for ordinary luminaires. No cord anchorage is required if the cable does not exceed 80 mm or is inter-twined in the chain and the cable length between the links of the chain is shorter than 80 mm.

### Explanatory notes
