Fault condition test	<ul style="list-style-type: none"> - Normal operation - Mounting screws - Sub-clause 12.6 	OSM/LUM-ETF5	2019 ETICS Plenary Meeting

Question

How shall the test be carried out for a fault condition for Hg-lamp circuit (winding damages). Should a special method for raising the temperature be used?

Decision

You should use the temperature requirements for normal operation as specified in sub-clause 12.6 with the ballast mounting screws as base for the extrapolation by linear regression.
